EDUCATION

Bachelor's of Computer Science (Hons)(Artificial Intelligence) | CGPA: 3.27

October 2025

Asia Pacific University of Technology and Innovation (APU)

- **Focus Areas:** AI System Design, Software Evaluation, and AI Application Development
- **Related Coursework:**
 - Artificial Intelligence Methods: Part of a team that built a ML + DL system for soil fertility prediction and crop recommendation, where MLP Regressor outperformed other models.
 - Image Processing, Computer Vision and Pattern Recognition: Part of a team that built a vehicle license plate recognition system. Personally responsible for lorries, and motorcycles. Implemented Edge-preserving filtering, multi-stage edge detection, contour-based quadrilateral extraction, deep learning OCR, and state mapping from plate prefixes.
 - Enterprise Programming for Distributed Application (Java): Built a web-based Car Sales System with 3 types of end-users, each with multiple functionalities. Used JSP, JSF, and made connections to the backend database via JDBC using Enterprise Java Beans.

WORK EXPERIENCE

AI/ML

January 2026 - Present

Resource Data Management Asia (RDM Asia)

- Building short-term energy load forecasting models using time-series data
- Exploring feature engineering with calendar and weather variables (temperature, humidity, etc.)
- Researching and prototyping AI workflows using IBM Watson tools

Accreditation Officer | Assisting Director

September 2024 - February 2025

Malaysian Cricket Association

- Developed accreditation cards in Figma for 8 international teams, producing 400+ cards for the Women's U19 Asia Cup and ensuring smooth security clearance for players, officials, staff, and vendors.
- Built prototype animations in Adobe After Effects to modernize cricket broadcast visuals and enhance the viewing experience.
- Managed 10+ vendors across Sarawak, Johor, and Kuala Lumpur to gather and distribute information, generating 600+ accreditation cards for the Women's U19 World Cup in Malaysia.

PROJECTS

American Sign Language Interpreter (Semi-Finalist for FutureHack Battlefield)

July 2025

Team Lead | Lead Programmer

- Built a custom deep learning model for sign language recognition using the Roboflow ASL dataset, achieving 75% accuracy and 0.81 macro F1-score.
- Developed a real-time sign-to-text interpreter with closed captioning, enabling live translation of ASL during video calls.
- Applied computer vision and sequence modeling techniques to classify signs across multiple classes, improving communication accessibility by translating gestures into text in under a second.

ACTIVITIES AND SPORTS INVOLVEMENT

National Senior Cricket Player | State Cricket Player | National Youth Cricket Player

2016 - Present

Malaysian Cricket Association | Selangor Cricket Association

- Represented Malaysia as one of 18 national players, competing in 3 international tournaments, played for President's XI, and currently part of the National A Team.
- Demonstrated long-term commitment and resilience by competing with Selangor's state cricket team since 2016, contributing to multiple team championships and medal finishes.
- Developed leadership and adaptability while competing in youth internationals, earning Runner-Up in the 2019 ACC Eastern Region U16 held in Thailand and Champion in the Inaugural Belt and Road U16 Tournament held in China.

Graduate from Cohort 15

July 2025 - August 2025

Axiata's University Leadership Development Programme (ULDP)

- Selected as 1 of 80 participants from 800 applicants for Axiata's University Leadership Development Programme, recognizing leadership potential and problem-solving ability.
- Contributed as an influential decision-maker throughout the programme, shaping team direction without being the designated leader.
- Designed a prototype using Google Stitch and Figma, and presented it to judges in the CEO Challenge, strengthening pitching and presentation skills.
- Enhanced design thinking, critical thinking, research, and communication skills through multiple team and individual tasks.
- Served as CFO in a business simulation, managing financial documents, proposing viable figures, and leading the team to win under high-pressure conditions.

Grand Finalist of CodeNecton 2025 (Industrial Collaboration Track with BJBK)

November 2025

IT Society MMU Cyberjaya

- Built a multi-model Autocorrect System (Gradient Boosting, Random Forest, SVM, Naive Bayes) improving Malaysian IC and vehicle term normalization by over 90% accuracy through domain-specific mappings and batch evaluation.
- Developed a Document Parser Model for Malaysian vehicle certificates achieving 95%+ field accuracy with an average 9.39s processing time using FastAPI, spatial analysis, and cross-field validation.
- Trained a License Plate Detection Model using YOLOv8n/s on synthetic datasets, producing deployable weights (yolov8n.pt, yolov8s.pt) with >92% localization accuracy across all dataset splits.

SKILLS

- **Programming:** Python, Java, HTML, SQL, R, MATLAB, C++, C#
- **Technical:** Data Structures, Algorithmics, Machine Learning, Computer Vision, Figma
- **Honors:** Runner Up for MCA T20 Interstate 2025, 2nd Runner Up for SUKMA (Cricket: T20) 2022 and 2024
- **Languages:** English (Distinguished), Malay (Intermediate), Tamil (Basic)
- **Interests:** Cricket, Body-Building, Hackathons, F1
